## FULLY AUTOMATIC ROTARY BLISTER SEALING MACHINES

### YOUR MARKET ... OUR SOLUTIONS

Starview's **FAB Series** fully automated rotary type blister sealing machines are ideal for high volume or JIT production. Given the proper conditions certain models of these machines are capable of up to 20 cycles per minute in production. The **FAB Series** automated rotary blister sealing machines are built with the capability to feed blister(s), blister card(s) and discharge finished packages when proper tooling is installed. These machines may be used for conventional carded blisters, trapped blisters, club store trapped packages, full face blisters and half-clamshell styles as well as some applications using Tyvek, foils and other heat sealable lidstock. Four (4), six (6) and eight (8) station models are available. Four station models have 10" x 12" and 12" x 16" sealing areas and six and eight station machines are available with 14" x 18" or 18" x 24" sealing areas.

For machines capable of higher finished package volumes or with additional open stations for automation please consider Starview's **BSC Series Carousel** or **CBS Series Inline machines**.
